ROBOTX CHALLENGE 2022

Sydney International Regatta Centre

RobotX 2022 Trailer Specifications

Document Date: October 18, 2022

Towrex will supply trailers as per the drawing below. Trailers will be supplied complete and assembled ready for use. Trailer will be fitted with winch post, outriggers on each side of the chassis to support the pontoons. Outriggers will be positioned lower than the chassis to help with ease of launching and retrieving the boat. The trailer will be supplied as a single axle with black poly guards, ADR compliant lighting, coupling and other standard fixtures. Towrex Trailers supply ADR compliant trailers built to meet and exceed the minimum ADR design regulations as set out on the Australian Government website.

Please note: some adjustments will be required to the trailer once the boat has been loaded on to the trailer. Examples of adjustments would be width of carpeted bunks supporting the pontoons, height of the carpeted bunks guiding the pontoon on the trailer, location of winch post.
