Machine Intelligence Lab

RobotX 2026 - Community & Outreach

The Machine Intelligence Lab hosts many tours to the University of Florida. We are located in the center of Malachowski Hall, UF's new data science and artificial intelligence research center. Prospective students and their families, international researchers, faculty members, members of industry, and many more walk through the doors to our lab on a weekly basis. Machine learning and autonomous vehicles may be difficult to conceptualize if one does not work with them often. Our lab introduces our many visitors to the world of autonomous robotics and their applications for the future.
