

While our recent participation in outreach activities has been limited, we are proactively addressing this by planning several initiatives in the near future. Our team is coordinating opportunities to volunteer as judges for local LEGO competitions, where we can mentor young students and encourage their passion for robotics. Additionally, we are working with local schools to organize STEM Days, providing hands-on learning experiences to spark interest in science, technology, engineering, and mathematics. These efforts aim to strengthen community ties and inspire the next wave of innovators.
