

## Team Inspiration 2025 Outreach

As part of our motto, To Learn, To Share, To Innovate, and To Inspire, Team Inspiration continues to expose the next generation in local and Global communities to STEM learning. We have found that some of the best learning comes through teaching.

One exciting new addition this year is our team has been able to establish a robotics internship program for San Diego Mesa College students. This internship allows the students to learn about autonomous vehicles on RobotX, RoboSub and RoboBoat. The students gain hands-on experience in robotics. By concurrently enrolling in a work experience course, student interns are empowered to work with purpose, guided by SMART goals. With this approach, we have successfully recruited seven active team members, who are all engaging in meaningful projects, developing professional skills, and contributing to impactful outcomes to prepare them for employment in the real world.
