

ROBOSUB 2025

Middle East Technical University
METU MECH Nautronics

Community & Outreach Description

Our team actively participates in various educational and community activities aimed at increasing especially young people's interest in engineering, robotics, and technology, as well as raising awareness in these fields. Within this scope, we have organized workshops and meetups targeted at high school and university students. During these events, we provided information on fundamental concepts of robotics, programming, and autonomous systems, aiming to enhance participants' enthusiasm for technology.

Additionally, by collaborating with local schools, we supported students in establishing robotics clubs and offered advisory services. Our team members take great pleasure in mentoring young people to help them develop their skills in these areas and in sharing their experiences. We continue to actively support high school projects.

Through our community and educational efforts, we aim not only to focus on the competition but also to spread interest in technology to a broader audience. In this way, we value contributing to the upbringing of future generations as informed and well-equipped individuals in the fields of science and engineering.
