

## ROBOSUB 2025

Montana State University  
RoboCats

### Community & Outreach Description

The Montana State University Robocats were involved in the First Robotics Montana High School competition. The competition was hosted in the Brick Breeden Fieldhouse on the MSU campus. Robocats' involvement in the competition included setting up, judging, and supporting the robotics competition. The club also had an educational booth during the competition talking to young students about engineering opportunities. This process helped aspiring engineers exercise their talents and gain interest in the engineering field.
