

Team Simplexity Community & Outreach Submission

3 out of 7 of our members are a part of other robotics teams that have received prestigious FIRST awards in inspiration and outreach. As team lead, I would love nothing more than to feel Simplexity creates an impact beyond archetypal successful engineers. Unfortunately our team hasn't had enough people, money, and especially time to move past the technical AUV design into outreach. We have only plans in educating underprivileged schools in San Diego to help connect poor and privileged: an untapped source of fresh community and perspective into the innovation we desire.
