Our SeaPerch is unique because:  

The ROV has a small build and a hydrodynamic, pentagonal shape. Considering the propellers, the team built a metal cage around the motors for protection. This design allowed better maneuverability. When the team chose these features, the running times improved.

Our biggest takeaway this season is:  

This season, the team learned how to cooperate under a time crunch and learned how to apply the principles of engineering. The team has also learned how to make quick changes and adapt. The team would not have been able to reach its goals without the team’s collective creativity.
