

“For four of the members of our team this is our first year of sea Perch. One of our members had competed last year but did not compete at the international level.”

Our ROV is a modified version of the utility ROV. We did this to maximize build simplicity and efficiency. We utilized the thruster covers because they were at our disposal and we felt they would help the ROV succeed. The best part of our ROV isn't the machine itself...it's cadet driving it, and the cadets that built it.

Made possible through  
**NJROTC**

Our ROV is unique because of it's simplicity. At the regional competition we saw many advanced ROVs and ours looked very unsuspecting. It not about the way you look, it's about the way you perform.

Our biggest takeaway from the season is that you need to be able to rely on your teammates to do well in anything. Teamwork allowed for people to specifically work on what they were best at which would lead to us as a team working more efficiently. It also let the effort be evenly distributed so no one member would get burned out.
